Northumberland County **Photography Workshops** at The Woodlawn Inn, Cobourg, Ontario Canada

Richard Martin and Charlene Kenna

Explore your Creative Spirit

Imagine yourself immersed in a place where you can live photography virtually free from the distractions of the outside world. Imagine indulging yourself in an environment where the focus is on you and your photography, with all the freedom to play, experiment, and be adventuresome. The workshop experience can provide that opportunity through a variety of programs designed to advance skills, provide inspiration, explore new ideas, and deal with the creative process of photography. Whether you're interested in developing your own visual style or expanding your knowledge of craft,

attending a workshop may turn out to be one of the best investments you make towards enriching your visual life.

Digital technology has opened many doors to photographers as a vehicle to express their ideas. It has also made the process of making and sharing images exciting. Digital Workflow is designed to enhance your knowledge with tools that will empower your photographic process, allowing you time to concentrate on what attracted you to photography in the first place: making fine photographs.

Workshop Content

VISION & DISCOVERY The aim of this workshop is to offer an intensive learning experience providing participants with a balance of instructional talks, (emphasizing composition and the principles of design), field trips, and group evaluation in the classroom. The emphasis is on creating more dynamic photographs by using the visual elements of line, shape, texture and perspective in composition. This is a workshop in vision and is suitable for photographers who are comfortable with their camera and want to break away from the traditional to re-examine the possibilities of what a camera can record— from novice to experienced amateur or professional.

images from colour originals, sepia and split-toning, various sharpening techniques, montage processes and impressionistic effects, gradients and many more creative possibilities including the use of Nik Software. Learn Software techniques through lectures and personal assignments in addition to examining bookmaking using Blurb Photo Books.

“The life experience you bring to your work along with your personal approach make your photographs unique. By being open-minded when learning your craft, you will develop a better understanding of how photography can enrich your creative life as you continue to develop your vision”

Richard Martin

DIGITAL WORKFLOW Utilizing the industry’s leading image-editing software, Adobe Photoshop® and Adobe Lightroom, we will cover digital capture, image editing, and workflow.

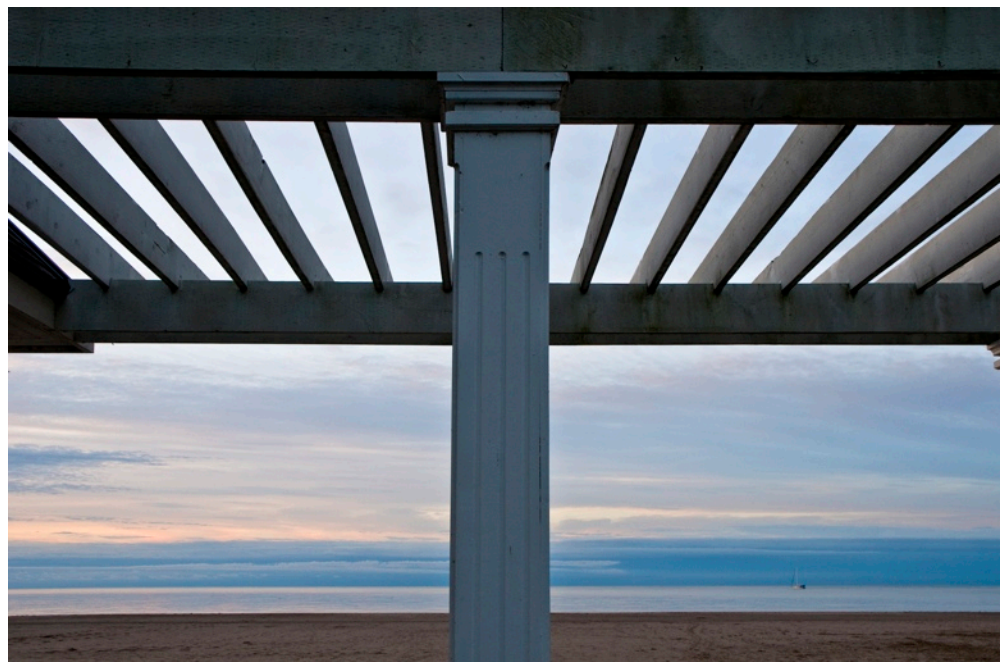

As instructor, my greatest challenge is to help participants see the world in new, active and deeply meaningful ways. You are invited to share in a photographic experience, which frees the creative spirit and renews one’s passion for photography. Common to all workshop programs is the emphasis on seeing and the philosophy of learning by doing. To ensure a quality experience, enrollment is limited to 8 participants.

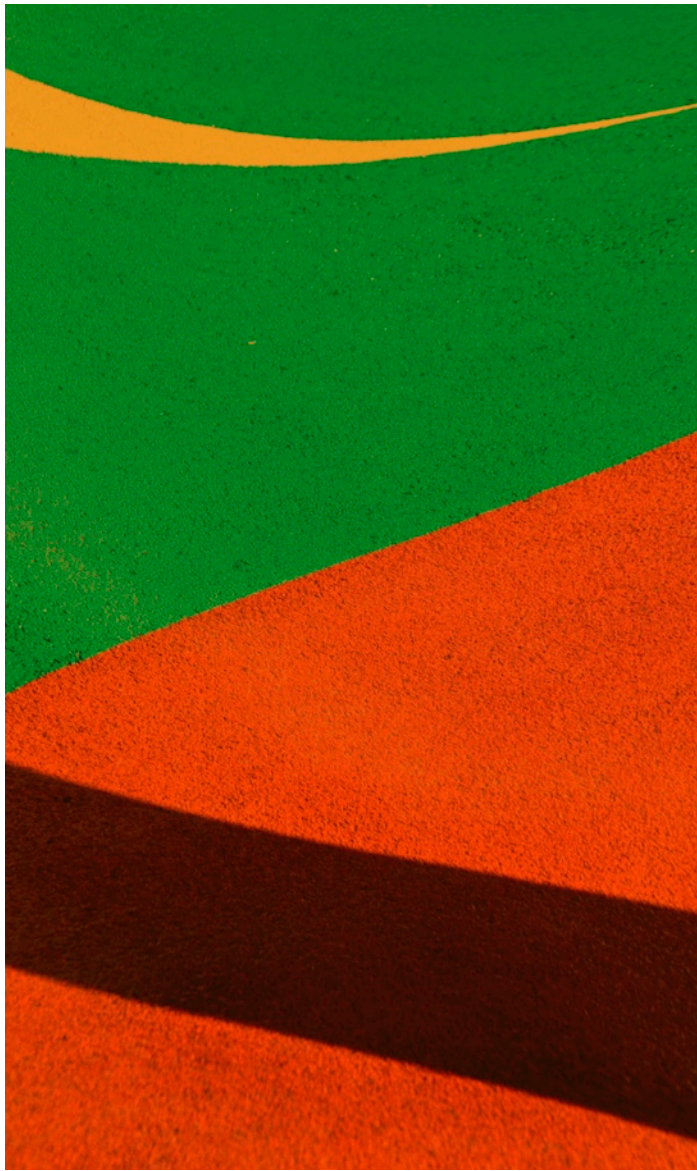

Topics include: Monitor Calibration, Raw workflow, traditional photographic techniques, burning and dodging, tone and contrast control, basic colour correction, using layers and channels, creating black and white
